

# DIGITAL HEALTH

Empowering People, Transforming Communities

October 17-19, Kigali Convention Center

AFRICA HEALTHTECH SUMMIT (AHTS 2023)

# REPORT

# ACKNOWLEDGEMENT

The success of the second edition of the Africa HealthTech Summit (AHTS) was made possible by the collaborative efforts of numerous partners, institutions and leaders.

Our heartfelt appreciation goes to the Government of Rwanda, more specially the Ministries of Health and of ICT & Innovation. We are grateful for the partnership with GSMA, the Africa and MWC Kigali Teams.

Special thanks to our institutional co-hosts, Africa CDC and Smart Africa, along with our lead partners - now called the G4 - The Mastercard Foundation, The Commons Project, GIZ, and UNICEF.

We also express our thanks to all other partners, speakers and participants for their invaluable support in making the 2023 edition a remarkable success.

**H.E. Dr. Jean Kaseya**  
Director-General of  
Africa-CDC

**Hon. Dr. Sabin Nsanzimana**  
Minister of Health - Rwanda

**Hon. Paula Ingabire**  
Minister of ICT & Innovation  
- Rwanda

**Mats Granryd**  
Director-General,  
GSMA

**Lacina Koné**  
Director-General,  
Smart Africa

# Our AHTS 2023 Partners

# About the Summit

The Africa HealthTech Summit 2023, co-located within MWC Kigali, was the pinnacle of healthcare innovation and digital transformation.

Under the theme **"Digital Health: Empowering People, Transforming Communities"** the summit aimed to revolutionize healthcare delivery throughout Africa.

The second edition successfully convened industry leaders, visionaries, and policymakers, fostering transformative partnerships to drive impactful change and inspire innovation within the healthcare sector.

- Private sector representation
- Launch of the African Youth in Digital Health Network (AYiDHN)
- Public Consultation on the Africa Digital Health Network (ADHN)

# Opening Ceremony

In his opening ceremony remarks, H.E. Paul Kagame thanked everyone present for the continued dedication and commitment to contribute to the growth and development of the African continent.

More importantly, he highlighted the key role the Covid - 19 pandemic has played in accelerating the transition towards a more digital future and emphasized the importance of togetherness, and collaborations to seek common solutions during times of crisis.

*"It is indubitably that digital health technology has the potential to revolutionize healthcare access, and through it address the critical gaps that exist."*

**- H.E. Paul Kagame,  
President of Rwanda**

*"Why are we in Kigali today? We want to hear from Africa. Africa's voice is crucial, and Rwanda was chosen to host AHTS 23 for its commitment to addressing health challenges and build a global pandemic-coping ecosystem."*

**- H.E. Dr. Jean Kaseya, Director-General,  
Africa CDC**

*"We are committed to enabling innovation and investment through collaboration with the public and private sectors."*

**- Hon. Paula Ingabire,  
Minister of ICT & Innovation - Rwanda**

*"860 million people lack mobile internet access. Collaboration among leaders and industries is the key to universal connectivity in healthcare."*

**- Mats Granryd, Director General, GSMA**

# AHTS OPENING PLENARY

## The New Africa Digital Health Deal: Stronger Health Security Through Digital Innovation

In Partnership with

The New Africa CDC Digital Health Deal aims to harness technology to strengthen Africa's pandemic preparedness, response, recovery and resilience while advancing universal healthcare objectives.

Giving his opening remarks **Jean Philbert Nsengimana**, highlighted it is the first time that the summit will birth the Digital Health Communities of Practice aiming at advancing the digital transformation of the health sector in the continent through holistic engagements with governments, private sector, civil society, academia, and startups.

*"The call to action is clear: a collective effort is essential to build upon existing foundations and propel Africa's digital health landscape into a future defined by seamless connectivity and impactful innovation."*

- H.E Dr. Jean Kaseya,  
Director-General - Africa CDC

*"It is also the first time that the summit has significantly attracted the private sector who play a pivotal role in augmenting existing partnerships."*

- Jean Philbert NSENGIMANA,  
Chief Digital Advisor - Africa CDC

In his keynote address, **H.E Dr. Jean Kaseya**, emphasized the profound impact of digital transformation on digital health, anchored in the 4Cs—Communities, Commodities, Cash, and Connectivity. Acknowledging the pivotal role of the youth, he highlighted challenges, including the crucial need for interoperability. Africa CDC's commitment was reaffirmed to amplify support for interoperability and enhance digital capacity across the continent through flagship initiatives.

## SESSION HIGHLIGHTS & OUTCOMES

- Policies must be community-centric and adaptable, aligning with evolving community needs to tailor initiatives to unique demographics while considering various factors such as geographical and infrastructural challenges.
- Engaging development partners is crucial to support government digital transformation, bridge the digital divide, ensure connectivity, and coordinate sustainable investments across sectors.
- Development partners are instrumental in shifting the continental narrative to an integrated enterprise. They sustain support for feasibility assessments, ensuring solutions are tested within the country context.

# Putting People First: The State and Future of Person-centered Digitized Primary Health in Africa

In Partnership with

At AHTS 2022, the Commons Project Foundation (TCP) and the Mastercard Foundation highlighted the importance of digitising primary care for the benefit of individual people and their continuity of care, and to help health systems run more efficiently and effectively.

This session revisited those ideas but also discuss how TCP and Mastercard Foundation recently undertook a project to understand countries' readiness for a person-centred health model and countries' maturity in the digitalization of primary care.

*"Prioritizing primary healthcare digitization is paramount for effective digital healthcare"*

- Zhenya Lindgart, CEO  
The Commons Project Foundation

## SESSION HIGHLIGHTS & OUTCOMES

- Achieving a digitized healthcare system in Africa requires addressing issues relevant to primary healthcare based on protections of data privacy, open standards and interoperability, capacity building of students, health workers and patients, and digitally enabling primary health teams.
- Latest innovations of today's health technology can be leveraged to accelerate the continent's healthcare sector transformation through advanced diagnostic tools, predictive analytics, AI, wearable technology, telehealth and remote monitoring.
- The implementation and utilization of open standards (HI7, FHIR, ICD10 etc.) in healthcare interoperability vary across countries. Hence the need to exert more efforts to streamline initiatives aiming at improving standardization of open standards across the continent.  
Many countries have some kind of personal data protection policies. But the problem of awareness across countries and communities is still a hinderance.

# Speakers

# From Detection to Action: Optimizing Africa's Disease Intelligence Systems for Stronger Pandemic Preparedness

In Partnership with

Africa confronts distinctive healthcare challenges, and recent global crises have accentuated the necessity for robust pandemic preparedness.

The COVID-19 pandemic underscored the importance of timely detection, data-driven decision-making, and coordinated responses. Africa's Disease Intelligence Systems are indispensable in achieving these objectives for better, pandemic preparedness.

*"At Africa Union, we're dedicated to advancing African healthcare through capacity building, policy advocacy, and global data coordination for a healthier future."*

**- Dr. Huyam Salih,  
Director of AU - IBAR**

# SESSION HIGHLIGHTS & OUTCOMES

- Harnessing data, community engagement, and multi-stakeholder collaboration are essential for addressing pandemics in Africa effectively.
- Prioritizing capacity building, advocating for pertinent policies, and fostering global data coordination are critical for advancing health.
- Identifying the source of the next pandemic is pivotal for public health protection, necessitating collaboration among all stakeholders and active community participation.

# Speakers

# Digital Innovations for Community Health: Advancing Equity and Sustainability

In Partnership with

The continent's public sector's distribution systems in the healthcare supply chain remain overburdened with many consumers still accessing essential medicines through fragmented private sector supply chains.

There is need to bolster efforts in improving the public sector supply. The session underlined the path to equitable and sustainable healthcare solutions through digital innovation. Collaboration and accessibility at the top of it all.

*"Partnerships with innovators especially through collaborative models with global development partners and donors will improve access and public health outcomes..."*

**- Alexandre de Carvalho,  
General Manager, IQVIA West Africa**

## SESSION HIGHLIGHTS & OUTCOMES

- Improve access and equity by minimizing supply chain fragmentation.
- Lower prices by reducing the existence of multiple layers along the distribution chain improving quality of services and products.
- Whilst EHR systems are widespread throughout the continent, their degree of use and data quality are still limited. Thus, more needs to be done to ensure such and similar systems are standardized and prioritized across the continent.
- Africa's digital maturity is less dependent on financial resources, but rather on governance, skilled workforce, and collaboration. Hence the need for more buy-in from leaders, capacity building and more collaboration in the continent to boost digital health.

# Speakers

## Beyond the Build: Nurturing a Skilled Digital Health Workforce in Africa

*In Partnership with*

Human resource capacity is a key factor for implementing and sustaining digital health interventions in Africa.

However, challenges hinder the development of a skilled health workforce that can effectively develop, use and manage digital health technologies. This session allowed participants to provide input and discuss priorities for the Africa CDC Digital Health Capacity Flagship Initiative.

This initiative aims at supporting African Union member states to build the digital health capacity of the health workforce, thereby enabling the effective design, implementation, and sustainability of digital health interventions.

## SESSION HIGHLIGHTS & OUTCOMES

- Creating a competitive framework, and equipping citizens with skills, knowledge, and digital health data is vital for health systems worldwide, not just in Africa.
- Political will is crucial. African leaders' involvement and vision are key to achieving successful digital health workforce.
- Regular and ongoing training and retraining of the current health workforce are essential to advance Africa's digital health maturity.

# Fostering Digital Health Excellence: Public Health Informatics (PHI) Fellowship Program

*In Partnership with*

Africa CDC is developing a pan-African applied Public Health Informatics Fellowship Program (AES-PHI) to train digital health leaders for Africa.

The two-year applied program, with a mix of didactic (20%) and practical (80%) training, focuses on nine informatics competencies prioritised by Africa CDC's Technical Advisory Group. As a minimum requirement, fellows will also conduct short-term technical-assistance and capstone projects, and prepare a manuscript.

Upon graduation, fellows will be able to develop, manage, and lead public health organisations such as NPHIs to become Informatics-savvy Health Organizations (ISHOs) with relevant capabilities in the areas of policy, governance, workforce, and information systems.

# SESSION HIGHLIGHTS & OUTCOMES

- Africa CDC is committed to empower African health practitioners with digital health skills.
- The AES-PHI program aims to equip individuals for leadership roles in public health organizations, preparing them to effectively manage and lead towards the designation of ISHOs (Integrated Service Health Organizations.)

# Speakers

**Dr. Muzna Mirza**

# Africa Youth in Digital Health Ministerial Breakfast

In Partnership with

The Youth in Digital Health Ministerial Breakfast, hosted by Africa CDC and the Mastercard Foundation, brought together young health-tech leaders and officials to discuss and enhance youth engagement and opportunities in the field.

The event, which also marked the launch of the Africa Youth in Digital Health Network, celebrated digital health innovation, including the unveiling of the 2nd edition of the Innovator Awards in Africa.

Distinguished institutions, including the Ministry of Health, Rwanda, and Speak Up Africa, showcased their impactful contributions in the digital health sector, fostering collaboration and recognition for advancements in the field.

*"In the realm of digital health, the youth are not just spectators, they are the architects of transformation."*

- Dr Semakula Muhammed - Ministry of Health , Rwanda

*"Today's digital health landscape is an open canvas, and the youth are the artists painting the strokes of innovation, resilience, and progress. This breakfast is a celebration of their role as pioneers in this transformative journey."*

- Yacine Diop Djibo , Executive Director, SpeakUp Africa

*"Let us remember, the power of the youth is not just in their potential, but in their proactive contribution to shaping a healthier, digitally empowered tomorrow."*

- Antoine Sebera: Chief Innovation Officer, RISA - Rwanda

# FHIRing Up Of Africa's Healthcare: Interoperability in Digital Health

*In Partnership with*

The 55 African Union Member States, represented by the Africa CDC, have strongly advocated for standards-based interoperability of digital health technologies.

This endorsement reflects their commitment to achieving "healthy and well-nourished citizens" across the continent. Globally, the 194 WHO Member States, with 24% from Africa, have underscored the crucial role of standards-based interoperability in realizing Universal Health Coverage and promoting well-being for all.

Africa has grappled with health information systems lacking interoperability, resulting in resource wastage and increased burdens on healthcare workers. The evolution of standards-based interoperability, once deemed complex, is now practically achievable, with factors such as FHIR playing a significant role in making this a reality for digital health technologies in Africa.

## SESSION HIGHLIGHTS & OUTCOMES

- Priority towards health information systems and interoperability is positively shifting as noted in the work of Africa CDC in researching and sharing information on solutions that address interoperability and standards including that of FHIR.
- WHO is also continuing to move the needle in improving healthcare systems through a global strategy on digital transformation which also calls specifically on standards and FHIR for interoperability as a starting point.  
Africa on FHIR commits to ensure that there is alignment, convergence and harmonization around policy level for interoperability through FHIR.
- Whilst FHIR is the starting point to transform healthcare systems through global open standards, three key are important to ensure unique needs of countries at family level address, and sustainability is achieved: need for capacity, need for localization and need for policy

# Speakers

**Steve Wanyee**  
President-Elect, HELINA

*Moderator*

**Zhenya Lindgardt**  
CEO,  
The Commons Project Foundation

**Celeste Grade**  
Health AI Business Development,

**Dr. Garrett Mehl**  
Head of digital health technology unit,  
WHO

**Dr. Tom Oluoch**  
Deputy Branch Chief -  
Epidemiology, Surveillance and Informatics, CDC

## Connected Diagnostics: Enhancing diagnostic systems in Africa with proximity, speed and precision

*In Partnership with*

Connected diagnostics integrate digital technology at the point of testing, which can strengthen clinical and surveillance systems through functions such as real-time data capture and transmission, algorithms for decision support and process management, and linkage to care.

By supporting more advanced diagnosis at lower levels of care, for example, through the use of artificial intelligence for interpretation of chest x-ray readings or wearable devices for early detection of cardiovascular disease, connected diagnostics also have the potential to expand coverage of essential diagnostic services.

# SESSION HIGHLIGHTS & OUTCOMES

- Success in connected diagnostics lies in embracing AI, digital devices, and cultivating strong ownership among key stakeholders.
- Addressing proximity not only speeds up processes but also enables predictive planning in healthcare.
- Emphasizing the importance of digital connectivity in Africa for sharing health successes, innovations, and best practices, the focus is on heightening awareness among practitioners and enhancing a nation's understanding of its extensive impact.

# Speakers

**Paula Akugizibwe**

Lead, Market Facilitation and  
Digital Health Partnerships, PSI

*Moderator*

**Kyeng Mercy**

## HealthConnekt Africa: Building the Digital Health Infrastructure of the Future

In Partnership with

Healthconnekt, an initiative developed through a multisectoral approach, tackles the connectivity challenges in primary healthcare across member states.

As a flagship initiative of Africa CDC and UNICEF, it orchestrated a high-level discussion. The aim was to foster political will among member states and regional institutions, identify synergies with complementary initiatives, assess past efforts to address connectivity issues, and promote multi-sectoral opportunities.

The overarching goal is to align partners and firmly embed this initiative within national plans, ensuring a comprehensive and effective approach to addressing connectivity challenges in primary healthcare.

## SESSION HIGHLIGHTS & OUTCOMES

- Enablers such as electrification, connectivity are absolutely vital to achieving the promises of a digitized healthcare ecosystem.
- Collaborative frameworks are necessary to bring onboard over 680 million people in Sub Saharan Africa who are under broadband coverage but not using the service and to find sustainable ways to find coverage for the remaining 20% of people in Africa.
- Insights from existing challenges and innovative solutions emphasize the necessity for sustained and predictable financing. This involves partnerships with communication operators, exploration of innovative funding models, and engagement with international institutions.
- The need to clearly communicate the value proposition to cater for unique needs of different stakeholders and bolster investments for digital health transformation.

# Speakers

## Transformative partnerships for digital health: Joining forces to increase access to equitable, quality care

*In Partnership with*

The Digital Connected Care Coalition advocates for the singular path to advancing scalable and impactful digital health: collaboration.

Adopting an ecosystem approach, the coalition strategically amalgamates the strengths of public and private organizations, forging transformative partnerships. This collaborative endeavor aims to improve health outcomes for both patients and care providers.

The introduction of this approach is substantiated by three concrete examples of existing partnerships, namely on accessible health data across nine African countries, an investment fund, and the digital care delivery model. These initiatives collectively underscore the coalition's commitment to driving positive and enduring advancements in the realm of digital health.

## SESSION HIGHLIGHTS & OUTCOMES

- Presented DCCC as a transformative partnership platform with a unique Way of Working, creating an interactive and energetic environment.
- Explored how the public and private sectors synergized in 'Transformative Partnerships,' providing examples: (1) VODAN, (2) MedicalCreditFund, and (3) brick&click projects, including the connection to the Swiss-RE 700k Entrepreneurs for Resilience award.
- Collaboratively explored specific priorities and actions with the audience, defining the roles of various stakeholders in the process.

## Strengthening Health Data Governance: Building Consensus through an African Common Position

*In Partnership with*

Stakeholders were introduced to the Africa CDC flagship initiative on health data governance.

The objective was to develop an African Common Position on Health Data Governance, fostering strengthened alignment and consensus across countries and stakeholders.

The initiative aimed to establish a model set of regulations governing the collection and use of health data, facilitating a unified and coherent approach to health data governance across the continent.

# SESSION HIGHLIGHTS & OUTCOMES

- Develop minimum standards through member-state consultations.
- Ensure robust government and multi-stakeholder involvement to establish an African common position on health data governance. This includes agreeing on common standards, technical guidance, and tools for enhanced data governance.
- Formulate a data standard strategy to achieve unified, standardized data in the healthcare ecosystem, addressing challenges related to data fragmentation and exchange.

# Speakers

# One Health in the Digital Age: Harnessing Technology for Integrated Prevention, Detection, and Response Across Humans, Animals, Plants, and Ecosystems

In Partnership with

One Health Data serves as the foundational element for constructing dependable and enduring One Health digital solutions.

Whether the planned digital intervention involves analytical tools, platforms, information systems, or Internet of Things (IoT) devices and applications, robust data stands as a prerequisite for seamless operation.

Specifically, the integration and interoperability of One Health Data are fundamental pillars, facilitating effective information sharing and coordination across One Health sectors while reinforcing One Health Management and Governance. Recent discussions within the One Health domain have introduced new conceptual frameworks, such as "One Digital Health," "Digital One Health," and "Digital Global Public Health," all sharing a common goal of harnessing digital tools to address health challenges.

*"Rwanda's commitment to digital initiatives is emphasized by our focus on accessible environmental data. Initiatives such as the Biodiversity Information System and Rwanda Climate Change Portal pave the way for a carbon-neutral and resilient nation."*

*- Hon. Mujawamariya Jeanne d'Arc, Minister Of Environment, Rwanda ,*

## SESSION HIGHLIGHTS & OUTCOMES

- Establishing correlations between animal health and public health relies on sustained integrated surveillance systems, utilizing risk-based surveillance, cluster analysis, regression, or simulation models.
- Alliances like the African Union One Health Data Alliance, which foster a collaborative, data-driven approach to managing the interconnected health of humans, animals, and ecosystems, merit attention and scaling.
- Efforts to standardize the use of animal health and climatic data for forecasting public health events need augmentation. Collaborative models with global development partners and donors, particularly through partnerships with innovators, can enhance access and public health outcomes, addressing gaps and fostering higher adoption levels of digital applications in the health sector.

# Speakers

## Building inclusive responsible digital payments ecosystems to strengthen health systems

In Partnership with

The session on forging an inclusive digital payments ecosystem delved into the transition from cash to digital payments in Africa, leveraging existing financial and infrastructure resources.

Success stories and commitments were shared by Ethiopia, Ghana, and WHO, highlighting their active support for digital payment projects.

*"In Ethiopia over the last 3 years, we've adapted digital payment systems in healthcare with the support of partners & investors. We now have data collection platforms & mobile payment apps, thanks to our government driving this."*

**- Gemechis Melkamu, Digital Health Lead Executive Officer, Federal Ministry of Health Ethiopia**

*"We are building bonds to harmonize projects, advocating aligned initiatives, capacity building with people at the centre, supporting youth and enabling infrastructure."*

**- Idil Hussein - Researcher - Finnish Institute for Health and Welfare**

## SESSION HIGHLIGHTS & OUTCOMES

- Africa's shift from cash to digital payments relies on effective collaboration between the government and the private sector, leveraging available financial and infrastructure resources.
- The demonstrated success of digital payments in healthcare across Africa necessitates its broader advancement.
- Identification of resource mobilization opportunities through the responsible digitization of health payments is unlocking financing of Healthcare evolution.

## The Digital Health Funding Gap: Innovative Models to Fund Digital Health in Africa

*In Partnership with*

Addressing a 4.1 billion funding gap over five years requires heightened investments from governments, public and private sectors, and coordinated cost-effective strategies. Digital health, integral to health systems, plays a vital role in achieving Universal Health Coverage (UHC).

Recognizing the imperative of prioritizing digital health for all, challenges in the current funding landscape impede progress. These challenges encompass a lack of publicly available funding information, fragmented funding, insufficient emphasis on the enabling environment and core health system functions, and increased pressure on Official Development Assistance (ODA) due to the impacts of climate change.

The session featured fireside chats that delved into the needed strategies, the critical nature of the issue, and opportunities for improving funding.

## SESSION HIGHLIGHTS & OUTCOMES

- Africa's digital maturity is less dependent on financial resources, but rather on governance, skilled workforce, and collaboration. Hence the need for more buy-in from leaders, capacity building and more collaboration in the continent to boost digital health.
- Partnerships with innovators especially through collaborative models with global development partners and donors will improve access and public health outcomes to reduce gaps and low adoption levels of digital applications in the health sector. As data become more and more important to healthcare in today's digital world, more is needed today to overcome challenges around; fractured data quality, siloed health IT systems, changing regulatory environment, distrust of AI generated results and disconnect between data strategies and public health needs.
- Whilst EHR systems are widespread throughout the continent, their degree of use and data quality are still limited. Thus, more needs to be done to ensure such and similar systems are standardized and prioritized across the continent.

## Data Matters: Leveraging Data Use For Digital health transformation

In Partnership with

Effective digital transformation demands a comprehensive organizational approach to fully capitalize on technology and governance investments.

Often overlooked components crucial to success include workforce development and strategic data utilization, with a recognition of the significance of bringing data use to the forefront at subnational and community levels, closest to points of data generation.

This session featured representatives from Burkina Faso, Niger, and Malawi, sharing their experiences to underscore the transformative impact of strategic data utilization at community, subnational, and national levels.

# SESSION HIGHLIGHTS & OUTCOMES

- Integrated systems enhance data sharing for health and security, supporting targeted medical responses and situational awareness.
- Routine health information, surveys, research, and supervision data play a pivotal role in ensuring preparedness for healthcare responses.
- Collaboration between private and public institutions is critical for advancing digital health access and capabilities in Africa.

# Speakers

**Steve Ollis**

Senior Digital Health Advisor, JSI

*Moderator*

**Austin Gumbo**

Monitoring and Evaluation Officer,  
Ministry of Health, Malawi

**Dr. Mounkaila Aida**

Medical Doctor, MSP

**Paul Buchana**

Data Science and Machine Learning Advisor,  
Tony Blair Global Institute

## Transforming Healthcare Delivery in Rwanda Through Digital Innovation

*In Partnership with*

**ZENYSIS**

Rwanda has demonstrated remarkable progress in advancing its healthcare system, and this session delved into the pivotal role of digital solutions in further elevating healthcare delivery.

The discussion focused on the integration and implementation of digital technologies and innovations, showcasing Rwanda's achievements in utilizing these tools to enhance healthcare accessibility, quality, and affordability on a nationwide scale.

## SESSION HIGHLIGHTS & OUTCOMES

- Integrated systems enhance data sharing for health and security, supporting targeted medical responses and situational awareness.
- Routine health information, surveys, research, and supervision data play a pivotal role in ensuring preparedness for healthcare responses.
- Collaboration between private and public institutions is critical for advancing digital health access and capabilities in Africa.

# Speakers

**Dr. Eric Umuhoza**  
Assistant Professor, Carnegie Mellon University  
*Moderator*

**Dr. Muhammed Semakula**  
Head of Planning, Strategic Information and  
Health Financing, Ministry of Health

**Dr. Brenda Kaatera**  
Chief Innovation Officer,  
RISA - Rwanda

**Dr. Eric Remera**  
Division Manager,  
Research Innovation and Data science

**Dr. Jean Paul Uwizihwe**  
Regional Director,  
Zenysis Technologies

**Dr. Jennifer Batumuliza**  
Lecturer & Head of Data Driven Incubation Hub &  
short professional courses,  
African center of excellence in  
Data science-University of Rwanda

## Breaking Barriers: Women shaping the future of Digital Health in Africa

In Partnership with

SpeakUpAfrica.

African women are making substantial contributions to the advancement of healthcare and policies through technology, overcoming long-standing barriers such as a shortage of skilled workforce, limited funding, and unfavorable policy environments.

Stemming from one of the most successful Africa CDC initiatives, Africa Women in Digital Health (AWiDH), the session highlighted the strides made in the initiative over the past year. It emphasized the pivotal role of women in propelling innovation and progress in the digital health sector across the African continent.

## SESSION HIGHLIGHTS & OUTCOMES

- Mitigate the digital health gender gap through consistent multidisciplinary and multisectoral stakeholder engagement.
- Cultivate stronger commitment from government, private sector, civil society, and other partners to establish more favorable policies and regulations supporting women's participation in digital health in Africa.

Facilitate effective collaboration and coordination for women's meaningful engagement and leadership in digital health.

Establish partnerships and networks dedicated to empowering women in digital health across Africa.

# Speakers

**Maimouna Diop Ly**  
Senior Advisor for Health Policy and Financing,  
Speak Up Africa  
*Moderator*

**Dr. Frances Baaba da-Costa Vroom**

Empower School of Health

## AI for Health: Unleashing the next level in Digital Health Innovation

In Partnership with

Africa has emerged as a vibrant center for artificial intelligence (AI), especially in the realm of health and AI in general.

Notable events, such as the Data Science Africa, Deep Learning Indaba, and IndabaX conferences in 2017, alongside the establishment of Google AI in Ghana in 2019, and the burgeoning grassroots startup activity highlighted in the recent "State of AI in Africa 2023" report, underscore the continent's dynamic engagement in this field.

The session provided a pivotal platform for diverse stakeholders showcase their innovative solutions, strategies and initiatives, emphasizing the adaptation and implementation of AI to address challenges and foster progress.

## SESSION HIGHLIGHTS & OUTCOMES

- Precision in healthcare is paramount, and minimizing errors through AI is crucial for enhancing service quality.
- African leaders should prioritize data harmonization to access cross-border datasets. Regional sharing of healthcare insights facilitates mutual learning and contributes to improved health outcomes.
- In shaping a better healthcare future, it is imperative to engage local entrepreneurs, prioritize skills development, and involve governments in regulation and financing

# Speakers

**Joris Cyizere**

Strategy Lead - Centre for the Fourth Industrial Revolution Rwanda (C4IR)

*Moderator*

# AHTS Partner Dinner

The AHTS 2023 Partner Dinner set the stage for 2024 by fostering collaboration and partnerships within the digital health ecosystem. This gathering facilitated exciting discussions and forged valuable connections, contributing to the momentum driving healthcare innovation in Africa.

## Public Consultation on the Africa Digital Health Network (ADHN)

In Partnership with

The Africa Digital Health Network (ADHN) serves as a unifying force, bringing together diverse communities of practice, national digital health associations, experts, developers, healthcare providers, and other practitioners.

The session marked the conclusive public consultation on the establishment of ADHN, a pioneering umbrella organization aimed at uniting digital health stakeholders across the African continent.

Founding partners and network leadership shared insights into the initiative's origins, the identified needs and gaps it intends to address, and the comprehensive consultative process involving stakeholders from various sectors and regions that shaped the network's design.

*"It is the connecting agent for the Africa CDC digital health strategy and corresponding flagship initiatives, including the HealthConnekt Africa, Digitized Primary Care, Connected Diagnostics, Africa Digital Health Index, Africa Health Tech Summit, Data and Innovation Sandbox, among others."*

**- Jean-Philbert Nsengimana,  
Chief Digital Advisor - Africa CDC**

*"ADHN offers to remove silo approaches to driving impact."*

**- Kirstin Grosse Frie, Head of Project,  
One Health Data Alliance Africa, GIZ**

*"As digital health remains an impactful pathway that can make the African continent prosperous, healthy, and economically more vibrant, the ADHN presents an opportunity and space to build and sustain an ecosystem."*

**- Dr. Amit Thaker, Executive Chairman, AHB**

## SESSION HIGHLIGHTS & OUTCOMES

- The network's governance board needs to consider ways to bring onboard members from the traditional health care medicine sector.
- In Africa, the problem is not lack of strategies, but their implementation and financing. Therefore, the ADHN must ensure to tackle the challenge and gaps in the same.
- The ADHN must also ensure that information of the knowledge and outcome of ADHN must be produced in a way they can be easily consumed by leaders and governments.

# Speakers

**Dr. Daniella Munene**  
Head of External Affairs,  
Africa Health Business  
*Moderator*

# Digital-in-Health: Unlocking Value for Everyone

In Partnership with

Digital solutions and data are powerful accelerators in the ongoing transformation of health systems and how healthcare is delivered for everyone. But current approaches are opportunistic, piecemeal, and fragmented. New thinking—a digital-in-health approach—is needed to get more value out of technology and data, ensuring health systems deliver care that is accessible, equitable and cost-effective.

To support countries as they change their approach to digital-in-health, a new World Bank report, *Digital-in-Health: Unlocking the Value for Everyone*, offers pragmatic advice for governments and stakeholders embarking on this journey, irrespective of their digital proficiency or fiscal limitations.

## SESSION HIGHLIGHTS & OUTCOMES

- Digital adoption proved instrumental during the COVID-19 pandemic, demonstrating that countries with higher digital adoption responded more effectively.
- Prioritize digital health for complex challenges and leverage digital technology in healthcare.
- Foster collaboration among stakeholders to ensure seamless services and scale digital solutions for equitable access.

## African Youth In Digital Health Network (AYiDHN)

*In Partnership with*

The global digital market, currently valued at 200 billion, is projected to quadruple in the next four years, albeit still representing only about 5% of the total healthcare market. This presents significant opportunities for the youth to actively contribute to and participate in the digital health transformation.

The session served as an in-depth introduction to the African Youth In Digital Health Network, highlighting its pivotal role in four key areas: Youth Leadership, Skills and Capacity, Job Opportunities, and Networks, emphasizing the potential impact, market size, and engagement for the youth in shaping the continent's digital health landscape.

## SESSION HIGHLIGHTS & OUTCOMES

- Exposure to community challenges can be a source of inspiration.
- The youth present a significant opportunity to scale and accelerate the digital health transformation due to their tech-savviness, fresh perspectives, education and training, social influence, entrepreneurial spirit and them being early adopters, data literacy, networking, global perspective and design.
- It is important to always know that digital health is the same as Healthtech, and even e-health. It is an intersection of healthcare and technology aiming to improve health, wellbeing, and longevity.
- One key approach is to continue to scale up existing enabling platforms in the continent to accelerate impact.

Uganda

## Digital Supply Chain & Logistics

In Partnership with

Falsified vaccines and medicines cost Low and Middle Income Countries (LMICs) \$30 billion per year and over \$200 billion globally. This has a significant impact on both the health of individuals and the economies of the impacted countries.

One in 10 medical products in LMICs are reported as being substandard or falsified, potentially causing harm to patients and failing to treat the diseases for which they were intended. Not only do these products contribute to antimicrobial resistance, but they also lead to a loss of confidence in medicines, healthcare providers and health systems.

UNICEF has partnered with a number of donors and other development agencies as part of the Verification and Traceability Initiative (VTI), to address this issue through the implementation of a new Traceability and Verification System called TRVST (pronounced trust). The TRVST allows countries to verify the authenticity of health products and track and trace them through their supply chain.

# SESSION HIGHLIGHTS & OUTCOMES

- Appreciation of the risk of falsification and the scale of the issue.
- Efforts in traceability & verification of products through services like product registration, inspection & compliance, pharmacovigilance, clinical trials, imports & exports control.
- An understanding of how TRVST can support national initiatives to implement traceability systems to improve patient safety and supply chain efficiency.

# Revolutionising Healthcare: The ICT Policy Blueprint for a Digital Health Continent

In Partnership with

Falsified vaccines and medicines cost Low and Middle Income Countries (LMICs) \$30 billion per year and over \$200 billion globally. This has a significant impact on both the health of individuals and the economies of the impacted countries.

One in 10 medical products in LMICs are reported as being substandard or falsified, potentially causing harm to patients and failing to treat the diseases for which they were intended. Not only do these products contribute to antimicrobial resistance, but they also lead to a loss of confidence in medicines, healthcare providers and health systems.

UNICEF has partnered with a number of donors and other development agencies as part of the Verification and Traceability Initiative (VTI), to address this issue through the implementation of a new Traceability and Verification System called TRVST (pronounced trust). The TRVST allows countries to verify the authenticity of health products and track and trace them through their supply chain.

## SESSION HIGHLIGHTS & OUTCOMES

- Dialogue is ongoing to deepen collaborations between the Africa CDC and Smart Africa. The key emphasis here is to ensure discussions lead to projects, activities and then produce results.
- Ensure the Smart Africa working groups now maintains a 50/50 approach to bolster collaborations between the stakeholders in the health and ICT sectors respectively.
- Continue to commit to exert more efforts in the public digital infrastructure both at the country and continent levels. Focus remains in leveraging synergies to connect all health workers by 2030 through access to devices among others.
- Begin to leverage Smart Africa as the incubator for all new digital health networks in the continent.

# Thank You!

The success of the Africa HealthTech Summit 2023 owes much to the extraordinary support of our partners, outstanding speakers, exhibitors, attendees, and the dedicated HealthTech Summit team.

The AHTS stands as a testament to the collective endeavors of the entire continent in advancing digital health, fostering innovation, and building a more resilient and inclusive healthcare landscape across Africa.

# AFRICA

HEALTHTECH SUMMIT

A stylized map of the African continent is formed by a series of concentric, curved lines in shades of yellow and orange. The lines are more densely packed on the left side and become more sparse towards the right, creating a sense of depth and movement. The map is positioned to the right of the main text.
